

**Controls moisture, increases
air circulation in exterior walls**

Plastic Components' **Ultra-Lath® plastic lath** is ideal for all vertical cladding with drainage.

The Ultra-Lath drainage mat increases air circulation and provides superior moisture management in the wall. Plus, its high compressive strength prevents crimping at fastening points, eliminating blockages.

It comes in convenient plastic strips (Strip-Lath®) for use as furring strips, and/or sheets and rolls for full coverage.

Safe and easy to use, and unaffected by salt, moisture and chemicals, heavy-duty Ultra-Lath plastic lath is self-furred and compatible with all cement-based products.

Uses

Moisture management for exterior wall systems – above or below grade.

Ultra-Lath®
Overall thickness: 3/16"

Ultra-Lath Plus™
meets ASTM C1764 and C1780.
Overall thickness: 5/16"

Patent pending

- **Non-rusting** alternative to metal laths
- Lower installed cost
- Light weight
- Cuts with a utility knife
- Easy to handle
- No crimping at fastening points - eliminates blockages
- Non-dimensional
- Long, outdoor life –unaffected by sand and chemicals in cementitious wall coatings
