

Door - Non-Load Bearing Single Track Header Single Jamb

ADVANTAGES:

1. Use of cripple stud to receive head/sill tracks at the jamb studs helps maintain alignment of finishes.
2. Using a wider flange and thicker jamb stud material reduces cost of installation compared to built-up jamb studs.
3. Using a wider flange reduces possibility of installing a wall stud as a jamb stud.

DISADVANTAGES:

1. High-end reactions for single web jamb studs may require reinforcement to reduce web-crippling failure.
2. Base track may require reinforcement with clip angle and direct attachment to transfer end reaction to jamb stud.
