## 2. Product Description

### Basic Use

Old Mill Fasteners are specifically designed for compatibility with the Panel+ system when fastened mechanically over drainable building wrap products. Our fasteners are equipped with greater flexibility to eliminate crushing or tearing through the foam. They contain 36 holes designed to interlock with and increase base coat adhesion, and the plastic material has been engineered to provide great performance in hot or cold weather.

## 3. Installation

### Panel Attachment

Attach foam panel to sheathing with Old Mill plastic 2" washer using screws at least 1" longer than the thickness of the panel. These fasteners should be installed every 16" horizontally and 8" vertically. Care must be taken to assure that the fastener is firmly seated on the brick spacer and fastened so that the outer surface of the fastener is flush with the outer surface of the panel.

### Packaging

- Box of 1,000 (in sleeves of 25 for easy handling)
