Load Testing Data

The allowable span lengths for the nonstructural steel stud assemblies are based on the limiting span calculated wall at flexural strength, and end reaction strength. Based on the tabular information for both the Fixed and Adjustable TruFlush™ Backing the allowable spans as managed in comparison to common stud spacings of 12", 16", and 24" can be used with in conjunction with all typical stud gauge applications.

16 Gauge 2 Piece Configuration - Allowable Spans

DP (psf)	Span lengths (in) Based On Strength Vertical Spacing of TruFlush™ Backing
